Professional Summary

Dedicated self-taught software developer with a strong focus on the MERN stack. Driven by a passion for coding and problem-solving, I have developed a deep understanding of full-stack web development through hands-on experience and independent learning. My journey includes building and deploying robust applications, continuously enhancing my skills in JavaScript, React, Node.js, Express, and MongoDB and recently expanded into growing interest in cross-platform mobile applications using React Native. With a commitment to staying up-to-date with the latest industry trends and I thrive on tackling complex challenges and eager to contribute my skills to meaningful and growth-driven projects.

..

Technical Skills

- **Language and frameworks** : JavaScript, TypeScript, Express.js, Node.js
- **Front End Development** : React.js, Redux, Redux Toolkit, WebSocket, HTML, React Native, Zustand, Bootstrap, Tailwind, css
- **JavaScript Proficiency** : DOM manipulation, ECMAScript 6+ features
- **Back End Development** : Node.js, Express.js
- **Database** : MongoDB, MySQL, PostgreSQL
- **API Security** : RESTful APIs, JSON Web Token (JWT)
- **Tools** : Git, GitHub, VS Code, Babel, Webpack, NPM, Figma
- **Familiar With** : Data Structure, MVC Architecture, Clean Architecture, Postman, AWS, Razorpay, Firebase

Projects

- **Movie-Flex – Movie-Ticket-Booking** [Live Website](#) | [Source Code](#)

Movie-Flex is an innovative movie-ticket-booking platform designed to provide a seamless experience for users, theatre owners, and administrators. Users can explore detailed movie information, select theatres based on location, and book tickets conveniently. The platform enforces cancellation rules, allowing users to cancel tickets only up to one hour before the show, with refunds credited directly to their wallet. Theatre owners can manage their screens by adding movies, customizing seat allocations by tiers, and even marking seats for offline bookings. Administrators oversee the platform by managing users, theatres, and adding movies, enabling theatre owners to assign movies to screens. Users can rate movies, receive notifications for booking, cancellations, and reminders, ensuring a user-centric experience.

Technical Utilities:

- **Backend:** Node.js and Express.js implemented in TypeScript for robust and scalable APIs.

- **Frontend:** React.js with TypeScript for a dynamic and responsive user interface.
- **Database:** MongoDB for efficient and flexible data storage.
- **Authentication:** Secure JWT-based user authentication and authorization.
- **Notifications:** Real-time updates powered by Socket.io for booking, cancellations, and reminders.
- **Scheduling:** Cron jobs for automated tasks like reminder notifications, ticket cancellations, and showtime cleanups.
- **Architecture:** Clean architecture principles for modularity and maintainability.
- Integrated **Razorpay** for fast and secure payment processing.
- Leveraged **Chart.js** for data visualization, providing insights into sales and user activities.
- Hosted the platform on **AWS Cloud**, ensuring scalability, reliability, and high performance.

-
- **Tech-Tique - E-commerce Platform** [Live Website](#) | [Source Code](#)

Tech-Tique is a fully functional e-commerce website that allows users to purchasing electronics like Mobiles, Watches, Headsets from online. The platform offers a seamless shopping experience with a focus on user convenience and security.

- Built the frontend with **HTML, CSS, JavaScript, Bootstrap** for a responsive and user-friendly interface.
- Developed the backend in **Node.js** using **Express.js** and **MongoDB**, ensuring secure and efficient data management.
- Integrated **Razorpay** for fast and secure payment processing.
- Implemented **NodeMailer** for email notifications, keeping users informed about their orders and updates
- Leveraged **Chart.js** for data visualization, providing insights into sales and user activities.
- Hosted the platform on **AWS Cloud**, ensuring scalability, reliability, and high performance.

Technologies Used : HTML, CSS, JavaScript, Bootstrap, Express.js, Node.js, MongoDB, Razorpay, NodeMailer, Chart.js, AWS

MINI PROJECTS

User Management System

[Github](#)

- Developed a comprehensive **User Management System** using the **MERN stack (MongoDB, Express.js, React.js, Node.js, context)** for efficient user management.
- Implemented features like user authentication, authorization, profile management, and a responsive interface.

Weather App

[Github](#)

- Developed a Weather app using React +Typescript featuring live geo-location for accurate weather updates, temperature and humidity display having stylish UI, search functionality of city and weather icons integration based on temperature conditions

Disney India clone

[Github](#)

- Developed a Disneyindia HomePage clone using **HTML, CSS**

Dark Fantasy clone

[Github](#)

- Developed a **DarkFantasy** clone by Replicated designs with HTML, CSS, JavaScript and mediaqueries.
-

EDUCATION

BSC CS: Bachelor program in Computer science from Thunchath Ezhuthachan college affiliated to university of Calicut

Work Experience

Software Engineer Intern

Zendalona – Palakkad, Kerala Sep

2025 – Mar 2026

- Contributed to **development, testing, and maintenance of accessibility-focused digital products** including z.Ladder, z.Map, z.TextGrab, z.WebKeyBind, z.LIOS, and related applications; collaborated with developers to identify and resolve issues during product releases.
- Performed **manual, regression, sanity, and blindfold accessibility testing**, validating usability for visually impaired users and supporting testing across different environments including Linux.
- **Developed and maintained the Zendalona website**, initially building components using React and later implementing and managing the production version on WordPress, **accessibility support for visually challenged users, wireframe reviews, and preparation of documentation/tutorials and release notes** to improve product usability and accessibility awareness.
